Reg No.: $\qquad$ Name: $\qquad$
APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY FIRST/SECOND SEMESTER B.TECH DEGREE EXAMINATION, APRIL 2018

## Course Code: BE100

## Course Name: ENGINEERING MECHANICS

Max. Marks: 100
Duration: 3 Hours

## PART A

Answer all questions, each carries 5 marks.
What are the conditions of equilibrium in concurrent and non concurrent force system?

Find the magnitude and direction of the resultant force, if $30,40,50$ and 60 N forces are acting along the lines joining the centre of a square of side 2 m to its vertices.
Two cylinders of weights 400 N and 200 N with radius 2 m and 1 m rest in a horizontal channel having vertical walls and base width 5.6 m as shown in figure A. Find the reactions at A,B and D.

Figure A

Figure B

11 Determine the reactions at the supports of the beam shown in figure B.

13 a) State the theorems of Pappus Guldinus.
b) A block weighing 400 N resting on a rough horizontal floor supports a block $B$ weighing 200 N . The blocks are connected to a string passing over a smooth pulley as shown in figure. Determine the least horizontal P to be applied to block A so as to just move it towards right. $\mu=0.25$

14 a) A uniform ladder of weight 100 N and length 5 m is placed against a vertical wall in a position where its inclination to vertical is $30^{\circ}$. A man weighing 800 N climbs the ladder. At what position will the ladder slip? Coefficient of friction for all contact surfaces is 0.2 .
b) A simply supported beam AB of span 4 m is carrying a uniformly distributed load of $5 \mathrm{kN} / \mathrm{m}$ over a length of 2 m from the right hand support. Calculate the support reactions using the principle of virtual work.

## SET III

15 In a crank and connecting rod mechanism, the length of the crank and the connecting rod are 12 cm and 50 cm respectively. The crank is rotating at 300 rpm . Find the angular velocity of the connecting rod and velocity of the piston when the crank is at an angle of 45 with the horizontal.

16 Two bodies of weights 60 N and 40 N are connected to the two ends of a light inextensible string, which passes over a smooth pulley. The weight 60 N is placed on a smooth inclined planeof angle of inclinationof $10^{\circ}$, while the weight 40 N is hanging free in air. Determine acceleration and tension in the string.
17 A body performing simple harmonic motion has a velocity of $12 \mathrm{~m} / \mathrm{s}$ when the displacement is 50 mm and $3 \mathrm{~m} / \mathrm{s}$ when the displacement is 100 mm , the displacement being measured from the midpoint. Calculate the frequency and amplitude of motion. What is the acceleration when the displacement is 75 mm ?
